

1.Prereq: This guide assumes you have python installed and added to path.

1. Download the repository (<https://github.com/profLepton/5130f2022/>)
2. Open your terminal, navigate to the downloaded repository.
3. Use the cd command to go to (path_to_repo/IWS-Project/permo)

2. Run the following commands:

```
python3 -m venv flask_env (python for Windows, python3 for Mac/Linux)
source flask_env/bin/activate for Mac/Linux
.\flask_env\scripts\activate.bat for Windows
pip install flask
pip install flask_sqlalchemy
pip install flask_migrate
pip install flask_login
pip install flask_mail
pip install flask_wtf
pip install jwt
pip install email_validator
```

finally run

flask run to run the server

Then go to 127.0.0.1:5000/ to access the website.
